HF Motion Sensor (For WL060V LED17S MDU only)

By selecting the combination on the DIP switch, sensor data can be precisely set for each specific application.

	1	
I	ON	100%
II	-	50%

Detection area. (default 100%) show patterns.
Detection area can be reduced to 50% by selecting the combination on the DIP switches to fit precise applications.

	2	3	
I	ON	ON	5S
II	ON	-	1min
III	-	ON	5min
IV	-	-	10min

Hold time. (default 5 min.)
Refers to the time period the luminaire remains at 100% illumination after no motion detected

	4	5	
I	ON	ON	5Lux
II	ON	-	25Lux
III	-	ON	50Lux
IV	-	-	Disable*

Daylight sensor. (default 25 lux.)
The sensor can be set to switch on the luminaire below certain light levels (5/25/50 lux). When it is set to Disable mode, daylight sensor will switch on the luminaire when motion is detected regardless the ambient light level.

	8	
I	ON	10%
II	-	25%

Stand-by dimming level. (default 25%)
Dimming level when there is no motion after the hold time to save energy.

	6	7	
I	ON	ON	0S
II	ON	-	1min
III	-	ON	10min
IV	-	-	+∞

Stand-by period. (default 10 min.)
Time period of keeping dimmed levels before the luminaire is completely switched off when there is no motion. When it is set to '∞' mode, dimmed light level is maintained until motion is detected.

- Notes:**
1. The Ledinaire Wall-mounted needs to be installed side-by-side in the same direction. The distance between each of the luminaires should be kept at least 3m to avoid mutual interference.
 2. Please pay attention to the installation environment:
 - 2.1. Avoid high-density objects such as: metal, glass, concrete walls, etc., within the sensor detection area.
 - 2.2. Avoid moving signals within the sensor detection area such as: fan, DC motor, sewer pipe, air outlet, heavy rainfall, motion behind a thin wall etc. This to avoid false triggers of the sensor.
 - 2.3 Avoid shock & vibration in the environment of the application.
 3. In order to reach the common sensor distance the object move speed should be less than 1m/s . If an object moves with speed higher than 1m/s the detection distance will decrease.
 4. It is advised not to install a luminaire on a wooden surface. In case it must be installed on a wooden surface, the wood thickness must be more than 15cm.
 5. To avoid smaller detection range or abnormal operation, the Ledinaire Wall-mounted should not be installed in close distance to large areas of metal and glass (separation distance at least 1 m). Please reduce detection area setting or contact Signify to confirm the situation once the Ledinaire Wall-mounted works fails.
